

POWER

BRINGING POWERFUL NEW IDEAS WITHIN REACH. Finley Engineering has been a leader in design, engineering and construction of electrical power systems for over 50 years. During that time, we've been a part of industry growth and dynamic change, so we understand the challenges of today's industry environment like nobody else. And we put our experience to work helping our clients put innovative solutions into place, quickly and cost-effectively.

Finley clients include rural utility service cooperatives, municipalities, invest-owned companies, public utilities, energy transmission companies. And whether the project is large or small, our clients know they can count on us for responsiveness, ingenuity and excellence.

At Finley, a successful electrical power project starts with a foundation of solid planning. We've found that meticulous preparation ensures efficient construction, and can provide substantial savings. We develop standard design criteria and follow through with detailed designs, construction documents, contracts, contract administration and material lists.

Once the project is under way, we can provide construction observation and project management. Finley provides a broad range of capabilities, so you can choose the efficiency of a turnkey system, or choose individual services that meet your specific needs. Our planning and design for electric power systems includes all phases of distribution, transmission and substations to 345kV. We can complete all phases of your project, from initial planning to site selection, construction management, startup and a final working system.

SERVICES:

- Reports and studies
- Long range planning
- Construction work plans
- Plans and specifications
- Rates and costs of service
- Load management
- Environmental analysis and system protection
- Mapping
- Pole inspection
- Construction observation
- Right-of-way procurement

HERE'S HOW FINLEY WORKS

- Distribution system planning
- Distribution system engineering
- System mapping
- Financial and economic studies
- Substations
- Transmission
- Right-of-way/ Environmental services
- Surveying services
- Design cost estimates
- Economic selection studies
- Construction inspection
